Vidit Doshi

Chicago, IL | 312-358-2332 | doshividit33@gmail.com | LinkedIn

Skills

- **Programming & Analysis**: SQL, Python, MS Excel, Statistical Analysis, Airflow, Spark
- **BI & Visualization**: Tableau, Plotly, Streamlit
- **Cloud & Data**: Amazon Web Services, Snowflake, Git

Experience

University of Illinois **08/2024 - Present**
Data Specialist *Chicago, IL*

- Designed and deployed 5+ Tableau dashboards tracking budget allocation and spend for Finance; enabled 40% faster budget approvals.
- Built an internal data system in SQL and Node.js to automate record management, reducing data retrieval time by 60%.
- Analyzed 500K+ records in Python and SQL to identify 3 root causes of process delays, using statistical testing to validate findings; stakeholders adopted all 3 recommended interventions.
- Led migration of departmental data to AWS cloud storage, maintaining 100% data integrity with zero incidents.

EXL **10/2021 - 05/2023**
Business Analyst *New Delhi, India*

- Managed end-to-end deployment of policy changes for a top-10 U.S. consumer lender, overseeing a 4-stage validation process across 10M+ records to ensure error-free production releases.
- Reduced deployment cycle time by building automated data validation and reconciliation pipelines in Python.
- Translated business requirements documents into technical specifications, establishing a dual-review audit framework that met regulatory compliance standards.
- Standardized reporting across client teams by building Tableau dashboards, adopted company-wide to improve visibility for technical and business stakeholders.

Projects

Hospital Readmission Risk Analysis

- Analyzed 100K+ patient records in Python and SQL to identify key drivers of 30-day hospital readmission.
- Built a regression model and Tableau dashboard flagging high-risk patient segments for care teams to prioritize follow-up outreach.
- Findings could inform care coordination strategies to help reduce CMS readmission penalties.

Consumer Loan Default Risk Analysis

- Analyzed 500K+ loan records in Python and SQL to identify the strongest predictors of borrower default (credit score, DTI, loan purpose).
- Built a Tableau dashboard visualizing default rates by borrower segment for underwriting review.
- Recommended approval threshold adjustments for high-risk segments to reduce default exposure.

Marketing Campaign Conversion Lift Analysis

- Designed and analyzed an A/B test comparing ad-exposed vs. control groups across 580K+ users to measure impact on conversion rate.
- Used Python (SciPy) to run a two-proportion z-test, confirming a statistically significant lift in conversions for the treatment group ($p < 0.05$).
- Built a Tableau dashboard breaking down conversion lift by day and ad frequency, and recommended an optimal exposure threshold to balance conversion gains against ad fatigue/spend.

Education

Master of Science, Management Information Systems **08/2023 - 05/2025**
University of Illinois

Bachelor of Technology, Data Science **07/2017 - 08/2021**
NMIMS University
