VIDIT DOSHI

Business Data Analyst
Chicago, IL | +1 3123582332 | viditdoshi.work@gmail.com

SUMMARY

Business Data Analyst with 3+ years of experience turning product, customer, and transactional data into decisions across consumer SaaS and financial services. Specialize in customer-journey and retention analytics, KPI root-cause analysis, and forecasting, with a stack centered on SQL, Python, Snowflake, dbt, and Tableau. Known for building trusted analytical datasets and automating validation so stakeholders act on numbers they can rely on.

TECHNICAL SKILLS

- **Languages & Tools**: SQL (advanced), Python (Pandas, NumPy, SciPy), Git, MS Excel (advanced)
- **Data Platforms**: Snowflake, AWS (S3, Redshift, Athena), Relational databases, DBT
- **BI & Visualization**: Tableau, Plotly, Streamlit, Power BI
- **Analytics & Statistics**: A/B testing & experimentation, Cohort & Funnel analysis, Forecasting & Scenario Modeling, Anomaly detection, Predictive modeling, Hypothesis Testing
- **Business & Delivery**: Requirements Gathering (BRDs), Technical Specifications, KPI definition, Root-Cause Analysis, Data Validation & Reconciliation, UAT, Agile, Stakeholder Presentations

PROFESSIONAL EXPERIENCE

Intuit | *Business Data Analyst* **Jul 2025 - Present**

- Own funnel and retention analytics for 5M+ active customers across acquisition, onboarding, engagement, and retention, using SQL and Tableau to surface friction points that informed 4 roadmap decisions in the last two quarters.
- Designed and maintain 10+ analytical datasets in Snowflake/dbt joining transaction, subscription, and product-event data, now the source of truth for recurring product-performance reports used by 100+ stakeholders.
- Diagnosed a 12% drop in activation rate by segmenting across product, channel, geography, and lifecycle stage; isolated the driver to mobile-web signups from paid search, leading to an onboarding fix that recovered 9 pts of activation within 6 weeks.
- Partner with product managers on pre-/post-launch analysis for 8 feature releases; measured adoption, engagement, and early retention signals and recommended 5 optimizations, one of which lifted feature adoption 18%.
- Built Excel forecasting and scenario models projecting customer volume and revenue under 3 operating assumptions (base, upside, downside); forecasts landed within 4% of actuals over three quarters and underpin quarterly capacity planning for the onboarding and support teams.
- Automated recurring data prep with Python (Pandas) and scheduled SQL extracts, cutting weekly reporting effort ~15% while retaining validation controls on business-critical reports.
- Present findings to product and operations leadership through Tableau dashboards and concise written summaries; 4 dashboards adopted as standing inputs to quarterly prioritization.

EXL | *Business Analyst* **Oct 2021 - May 2023**

- Managed end-to-end deployment of business-rule and policy changes, running a 4-stage validation process across 10M+ customer records that delivered 3 consecutive error-free production releases.
- Built Python validation and reconciliation pipelines that cut pre-production data-check time from 7 to 3 days and reduced deployment cycle time by 12%.
- Translated BRDs into technical specifications and introduced a dual-review audit framework covering requirements, data changes, and regulatory-compliance checks, reducing post-release defects by 5%.
- Developed Tableau dashboards consolidating key business metrics; adopted company-wide across 6 client teams, replacing 5 manual weekly reports.

EDUCATION

University of Illinois Chicago | *M.S., Management Information Systems* **(GPA: 3.9/4.0)** **Aug 2023 - May 2025**

NMIMS University | *B.Tech., Data Science* **Jul 2017 - Aug 2021**

PROJECTS

Transaction Fraud Detection & Triage | Dashboard

- Designed an interpretable fraud-detection system whose top 1% of alerts capture over half of all fraud dollars.
- Turned model scores into a cost-based review policy, delivered as a Tableau decision dashboard.

Credit-Card Churn & Lifetime Value | Dashboard

- Paired churn prediction with customer lifetime value to surface $4.5M in at-risk revenue.
- Built a save-offer ROI model that sizes the retention campaign and outputs a targeted call list.
